

Moodle 2.x version. The current Moodle version is 3.x, and the course import/export level is not fully supported, but LTI is supported fully. This paper's contribution is to show ways to integrate Moodle to Moodle and Moodle and Canvas and more significantly develop and share the OKMindmap integration architecture design with Moodle to domestic LMS case. This methodology enhances online lecture quality and efficiency by sharing Moodle courses with rich activities, resources, and services. The classes can be duplicated and shared among instructors. With this, instructors can reduce the time and effort required for the course development. Sharing of quality online classes will eventually build up trust between different organizations. Courses can be standardized to meet the learning goals and quality control.
